Run this Statement to Update SQL Side of DB before implement next update.

```
UPDATE    tbl_Flow_StepData
SET       FlowStepName = N'Archived'
WHERE    (FlowStepName = N'Closed')
UPDATE    tbl_SO_Data
SET       Value = N'Archived'
WHERE    (Type = N'CurrentStatus') AND (Value = N'Closed')
UPDATE    tbl_SO_StepData
SET       StepName = N'Archived'
WHERE    (StepName = N'Closed')
UPDATE    tbl_Flow_StepData
SET       FlowStepName = N'Archived'
WHERE    (FlowStepName = N'Closed')
UPDATE    tbl_SO_Data
SET       Value = N'Archived'
WHERE    (Type = N'CurrentStatus') AND (Value = N'Closed')
UPDATE    tbl_SO_StepData
SET       StepName = N'Archived'
WHERE    (StepName = N'Closed')
```
