You need to first find where "mod_rewrite.so" is using

```
find -name "mod_rewrite.so"
```

You will get a path now you can use the path you got to add a line in your "httpd.conf" and make sure this line exists and is un-commented by removing any leading "#"

```
LoadModule rewrite_module /usr/lib/apache2/modules/mod_rewrite.so
```

If you do not get any errors and can use this line in your ".htaccess" file you one of your websites.

```
## Can be commented out if causes errors, see notes above.
```

```
Options +FollowSymLinks
```

```
#
```

```
# mod_rewrite in use
```

```
RewriteEngine On
```
